1 Introduction

The purpose of this document is to give you an overview of the new and modified features in Strato 2.0.

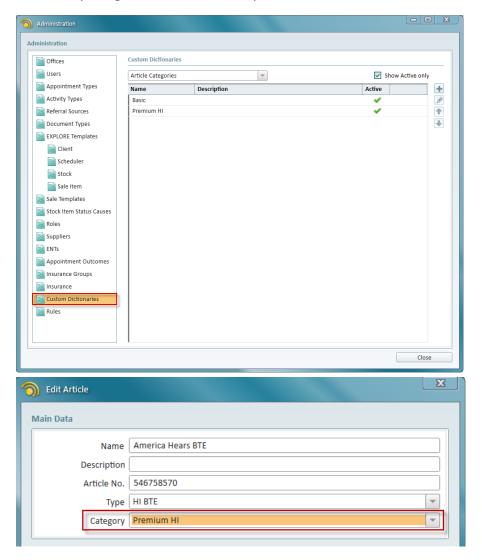

The available languages are English, Danish, Swedish, Norwegian, Spanish, and Polish. Strato v.2.0 is certified to NOAH 4 and works with Noah v.4.6.

2 Articles

2.1 Categories for Hearing Instruments

We have added a new property to Hearing Instrument articles. You can now assign your articles to categories if you want to categorize Hearing Instruments by, for instance, price level or technology.

You can create your custom category under **Tools > Administration > Custom Dictionaries** and then easily assign it to the article of your choice.

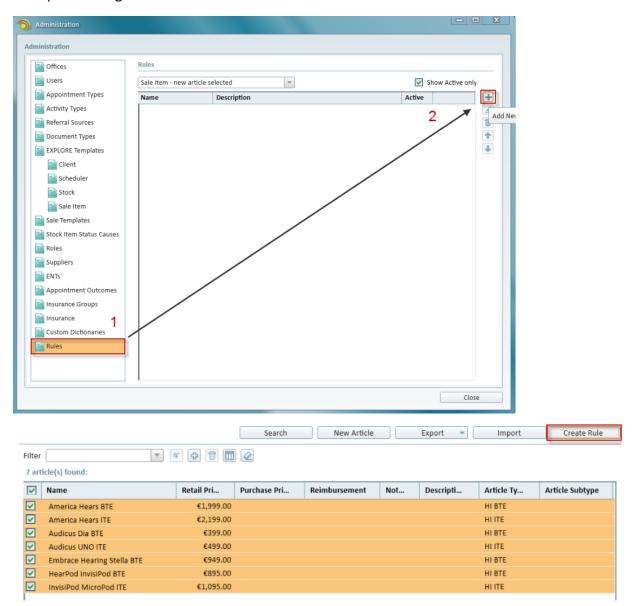

Now you can get an overview of the products you need by using a category filter from **Article EXPLORE**.

2.2 Related Products

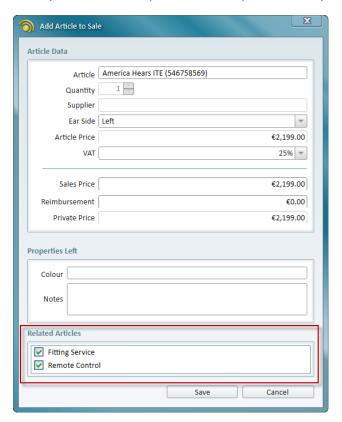

When selling, it may be important to be reminded about the related products, so that these can be added correctly. For instance, as you sell a Hearing Instrument, you can offer the customer to consider adding a relevant fitting service or certain important accessories.

This is why we have added a possibility for the Strato administrators to create related articles for the Hearing Instrument products. You will be prompted to add additional services to the sale during the checkout, providing your customers with products and services related to their needs.

You can add related articles from **Tools > Administration > Rules** or by selecting **Create Rule** from **Article EXPLORE**. The latter case is especially useful if you need to add related products for multiple Hearing Instruments.

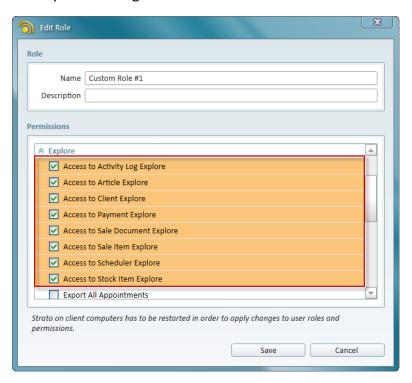

Finally, select the required related products as you add an article to the sale.

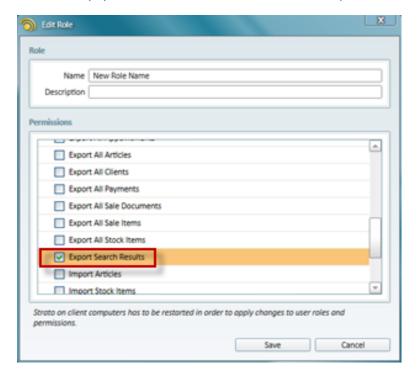

For more information on related products in Strato, please refer to the **Strato Related Products Guide**.

3 User Rights

Strato now provides you with more options to define user permissions under **Administration** > **Roles**. When creating a new custom role or editing an existing one, specify which Strato **EXPLORE** views you want to grant access to.

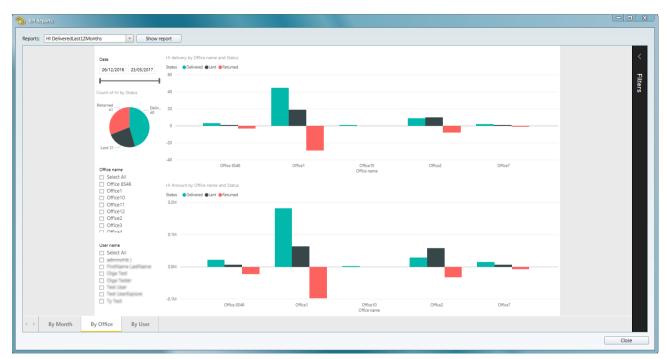

Additionally, you can define whether users can export search results from the EXPLORE views.

4 KPI Reports

We have introduced **KPI Reports** which include interactive graphs with valuable data to help you grow and support your business. For instance, you can get an overview of all the Hearing Instruments sold per office for the last 12 months. Moreover, it is possible to view this data by month or by audiologist.

Other examples are appointment statistics and graphs with data on the delivered Hearing Instruments. Finally, you can view detailed statistics on the new clients in your stores (by month, clients' age, referral etc.). Below is an example of how one of the KPI reports looks like.

Please contact your Strato Sales contact person if you want the KPI Dashboard reports enabled in your Strato version. Please note that this service is only available to Strato users using **Stock** and **Invoice** modules only.

5 Bug Fixes and Improvements

5.1 EXPLORE Views

• Purchase price is now a visible field in the **Sale Item EXPLORE** view. This is only true for users with permission to see purchase price; otherwise this field will be empty.

• The appointment creation date is now a visible field in the **Scheduler EXPLORE**.

5.2 Bug Fixes

We have fixed some bugs found in version 1.11 to make sure your experience with Strato is fully seamless:

- Fixed the problem of Strato v1.11 failing when running Offline;
- In Strato v1.11 you could not use some of the shortcuts and could not clear search criteria in the **Sale Item EXPLORE**. These problems have now been fixed.
